Chapter 1

Introduction

A little reference [1].

Equation 1: The Rendering Equation

$$\underbrace{L_o(x, w_o, \lambda, t)}_{\text{Outgoing Light}} = \underbrace{L_e(x, w_o, \lambda, t)}_{\text{Emitted Light}} + \underbrace{L_r(x, w_o, \lambda, t)}_{\text{Reflected Light}}$$

$$L_{r(x, \omega_o, \lambda, t)} = \int_{\Omega} \underbrace{f_{r(x, \omega_i, \omega_o, \lambda, t)}}_{\text{BRDF}} \cdot \underbrace{L_i(x, \omega_i, \lambda, t)}_{\text{Incoming Light}} \cdot \underbrace{\cos \theta_i}_{\text{Angle}} d\omega_i$$
